

APUSH

Unit 1 Day 3

1. Gather into large group to discuss the BATA questions that were due for today:
 - Identify patterns of movement of American Indians (Amerindians) prior to and after European contact.
 - What was the impact of migration, disease, and warfare on the Amerindian population?
2. Gather into the small groups that you have been assigned to. For this next activity you will need the handout, poster and markers...get them now!
3. Once you have collected all necessary materials, read through the summaries and timelines that you have been given. Then, use your prior knowledge, new knowledge, and the additional facts provided in the handout to create a UNIQUE, but logical Venn diagram.
4. When you have completed the Venn diagram, answer the following questions in your notebooks as a group:
 - Are there more similarities or differences in the diagram?
 - To what extent are they similar or different?
 - Why? List and explain at least three reasons to support your answer to the first two questions.
 - What is the opposing view? Identify one piece of evidence that could support the opposing view.
